TECH TIPS

CAT Cooling Systems

Clean and flush the cooling systems BEFORE the recommended maintenance interval IF the following conditions exist:

- Engine overheats frequently
- Any foaming is observed
- The oil has entered the cooling system and the coolant is contaminated
- The fuel has entered the cooling system and the coolant is contaminated

NOTE: Inspect the water pump and the water temperature regulator after the cooling system has been drained. This is a good opportunity to replace the water pump, the water temperature regulator and the hoses, if necessary.

Follow these tips from Caterpillar to ensure a long life for your Cat motor.
